

COVID-19 Weekly Report

Oregon's Weekly Surveillance Summary
Novel Coronavirus (COVID-19)

Oregon Public Health Division

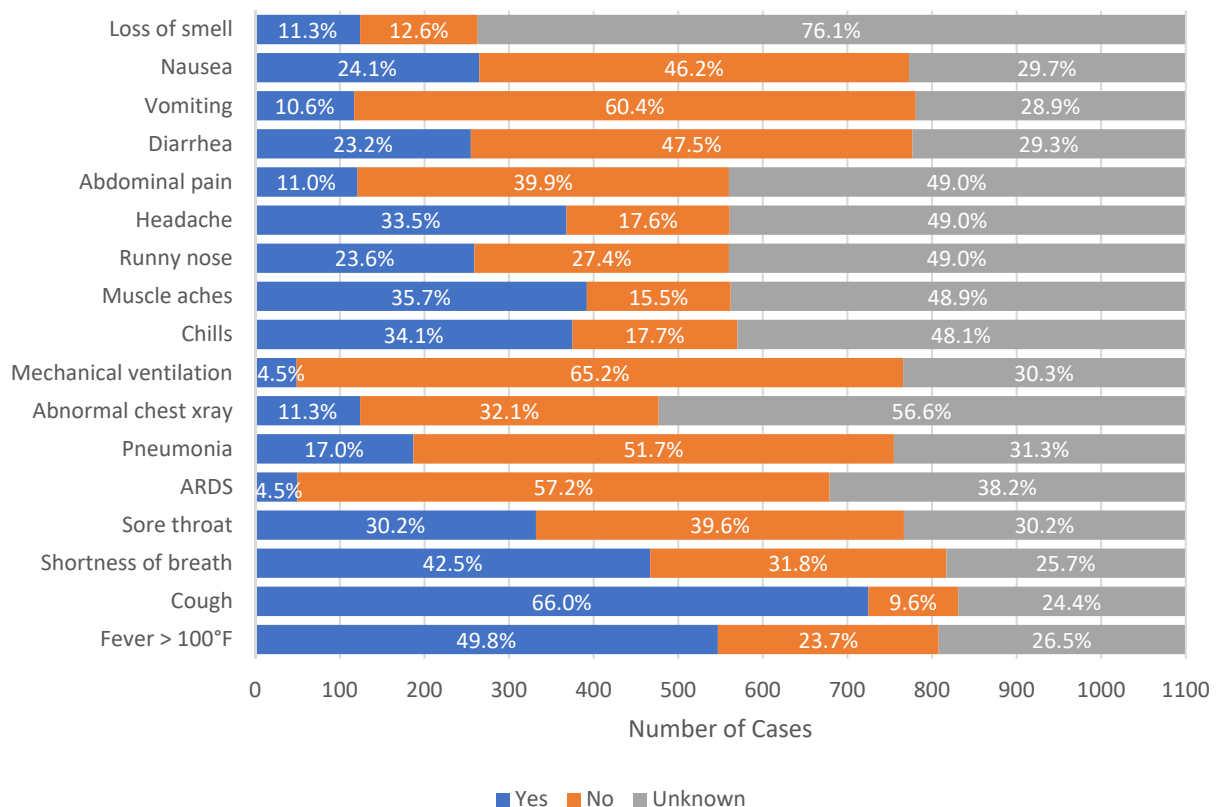

Published April 7, 2020

COVID-19 Weekly Report data will be finalized every Sunday at 11 p.m. and the report will be published the following day. **Please note that the data reported here are continually being updated. For daily up-to-date information visit the [OHA COVID-19 web page](#).**

As of 11 p.m. on Sunday, April 5, there have been 1,099 cases of COVID-19 reported to the Oregon Health Authority. Not all cases have been interviewed at the time of this report. These data represent a snapshot of COVID-19 risk factors, clinical and demographic characteristics and include data on cases with pending investigations. The data shown in this report comes from Orpheus, which is an electronic disease surveillance system for reportable diseases for the state of Oregon.

Figure 1 provides information on signs and symptoms from all COVID-19 cases. The two most commonly reported symptoms are cough (n=725, 66.0%) and fever (n=547, 49.8%). Figure 2 provides information on risk factors from all COVID-19 cases. The two most common risk factors are having underlying conditions (n=293, 26.7%) and contact with a known COVID-19 case prior to symptom onset (n=274, 24.9%). It is important to note that each person may report more than one sign/symptom or risk factor. Figure 3 shows the sex distribution of all COVID-19 cases.

*Congregate living situations include, but are not limited to, long-term care facilities, group homes, prisons, shelters, etc. Data include people with confirmed cases who live or work in congregated living situations.

**Direct patient care is only asked if a case is a healthcare worker or volunteer. The denominator is the number of healthcare workers or volunteers.

***Underlying conditions include cardiovascular disease, chronic liver disease, chronic lung disease, chronic renal disease, current or former smoker, diabetes mellitus, immunocompromised condition, neurologic/neurodevelopmental condition, or other chronic diseases.

The following tables show the demographic characteristics for all COVID-19 cases. Table 1 shows the age group distribution. Tables 2 and 3 show race and ethnicity respectively.

Table 1. Age group distribution for all COVID-19 cases (n=1099)

	n	% of total
0-19	23	2.1%
20-29	112	10.2%
30-39	165	15.0%
40-49	202	18.4%
50-59	203	18.5%
60-69	200	18.2%
70-79	116	10.6%
80+	77	7.0%
Not available	1	0.1%
Total	1099	100.0%

Table 2. Race distribution of all COVID-19 cases (n=1099)

	n	% of total
White	452	41.1%
Black	23	2.1%
Asian	28	2.5%
American Indian/Alaska Native	5	0.5%
Pacific Islander	10	0.9%
Other	174	15.8%
>1 race	12	1.1%
Not available	395	35.9%
Total	1099	100.0%

Table 3. Ethnicity of all COVID-19 cases (n=1099)

	n	% of total
Hispanic	202	18.4%
Non-Hispanic	485	44.1%
Not available	412	37.5%
Total	1099	100.0%
