

# What is Contact Tracing?

Contact Tracing is a tool public health workers use to stop the spread of a disease. Here's how it works:

**1**  
When someone tests positive for COVID-19, the health department is notified

**2**  
We call the person who tested positive for COVID-19 to see who else might have been exposed

**3**  
Once we know who else might have been exposed, we contact those people

**4**  
Public Health Workers will help them self-isolate and monitor their symptoms for at least 2 weeks to stop the spread of COVID-19

If you get a call from your Local Health Department about COVID-19, take it seriously.

What we ask for:

- ✓ Where you've been for the last few days
- ✓ The names and contact information of people you've had close contact with so we can call them
- ✓ We will NOT tell them who potentially exposed them

What we **DON'T** ask for:

- ✗ Social Security number
- ✗ Banking information
- ✗ Immigration status
